Public API Changes

Location and Suffix Added to PatientsSync

Changes to the PatientsSync

- `location` - A patient will be associated to a location based on the location code from the `/locationSync`
- `suffix` - Suffix will only accept the values that match the Updodx UI
- If an empty `location` or `suffix` is submitted, any previous values will be overridden
- An error will be returned for invalid `location` or `suffix` values

New CSV Mapping for SAML-Federated Users

We have created the CSV mapping workflow for SAML SSO users. The new CSV mapping will allow SAML SSO users to create new users and/or modify, and deactivate existing user accounts.

Restrict User CSV to Only Admin Users

We have added the ability to restrict User CSV file uploads to only Admin users. Non-admin users will not have the option to upload User CSV files. Non-admin users will still have the ability to upload CSV files for other tasks.
