Address Book Settings

Can Modify Address Book

Admins have the ability to restrict users from editing the Address Book. This setting can be found in **Menu > Admin > User > Settings**. The name of the setting is 'Can modify Address Book'.

If the checkbox is checked, then users can add and edit entries in the Address Book, the Compose window, and/or via the File Upload utility.

If the checkbox is unchecked, then users cannot make any changes to the Address Book. To be specific, they can not add entries from the Address Book, the Compose window or via the File Upload utility.

The screenshot shows the 'Settings' tab for a user. At the top, there are three tabs: 'User Information', 'Settings' (which is active), and 'Notifications'. Below these is a link 'Assign to CoolLoCation'. The settings are organized into two columns. The left column contains 'Time Zone' (set to 'Universal') and 'Items to show on one page' (set to '15'). The right column contains 'EHR User ID' (set to '-- None --') and 'Default provider' (set to '-- None --'). Below these are several checkboxes for permissions. The 'Can modify Address Book' checkbox is checked and highlighted with a red box. Other permissions include 'Can bill patient's credit cards', 'Can view billing reports', 'Can view Practice items', 'Can delete items', 'Can edit documents', 'Can send Text and Secure Text messages', 'Can send "Broadcast" messages', and 'Can Video Chat'.

Setting	Value
Time Zone	Universal
Items to show on one page	15
